

## PROJECT OBJECTIVE

Date	19 September 2022
Team ID	PNT2022TMID54302
Project Name	ESTIMATION OF CROP YIELD USING DATA ANALYTICS
Maximum Marks	2 Marks

Objective of our project is to collect data on crop yield and use them to estimate crop production for the future using Data Analytics from IBM Cognos Analytics Tool.

The results from the analytics give an insight on the crop yields like the amount of pesticide needed, the fraction of loss that can be incurred and avoided and so on.
